

## Electronics Development Technician

This is an opportunity for someone to have varied and interesting work in an engineering support role. Duties includes:

- Design of Test Equipment Hardware
- Building And Servicing Custom Test Equipment
- Wiring Harnesses & Connectors
- Assembly Of Prototype PCBs, Both SMD And Leaded
- Responding To Breakdowns Of Test Equipment On The Production Line

Pektron employs a wide range of staff and therefore successful and motivated candidates can progress into design or production engineering positions.

The ideal candidate will have a general interest in Electronics, Good Soldering skills and a logical approach to fault finding of electronic circuits

We are looking for a self motivated, team player who takes pride in work.

Experience of configuring PCs, simple electronic design: Analogue / Digital, Visual BASIC and PCB Layout would be advantageous but is not essential

Salary depending on experience.

Apply With CV including current salary to:
